Skills

Node.js / Typescript

React

React Native

AWS

Go / C / Python

Interests

Coding, coding, coding

Biking

Nature / hiking lover

Awards

Node.js Core Collaborator

Gitlab Hero

Languages

Italian
Native language

English

Summary

My name is Giovanni and I am a Senior Software Engineer who trades tea for code.

Currently based in Italy, impatiently waiting to find the next cool project to build!

Mechanical keyboard enthusiast (currently lost in the split keyboard rabbit hole), relentless linux distribution hopper, nature lover, and passionate bike traveler!

Experience

Geotab — September 2025 - Present
Senior Software Engineer — Remote
https://www.geotab.com/

I architect and develop robust telematics solutions that process billions of GPS data points daily from connected vehicles worldwide.

Working with React, TypeScript, and C# / .NET, I build real-time data pipelines and APIs that enable fleet management insights for millions of vehicles across the globe.

Node.js — May 2025 - Present
Core Collaborator

Joined the Node.js project as a Collaborator, contributing to core features, bug fixes, and code reviews.

Helping to drive the evolution of a platform that powers millions of applications worldwide.

Nearform — April 2024 - September 2025
Senior Backend Developer — Remote
https://www.nearform.com/

I developed high-performance backend systems with Node.js for major enterprise clients.
Working in a consultancy environment, I designed scalable and secure solutions that power critical applications for globally recognized companies.

fleetster — January 2023 - April 2024
AWS Devops | Techlead — Munich, Germany
https://www.fleetster.net/

Managed networking, database replication, VPC configurations, and much more.
Migrated the entire infrastructure to CloudFormation, enabling full environment deployment with just a few clicks.

Gitlab Hero
https://gitlab.com/

GitLab Heroes engages, supports, and recognizes members of the wider GitLab community who make outstanding contributions to GitLab and its community around the globe.

fleetster — July 2017 - January 2023
Fullstack senior Javascript developer — Munich, Germany
https://www.fleetster.net/

In charge of many core projects (backends, microservices, clients, AWS infrastructures).
Owner of Lambda functions and many Microservices in Node.js and Typescript.

Built the foundations and maintained over 10 mobile applications in React Native and clients written in React + Redux.

Archon Dronics — October 2015 - June 2017
Fullstack Developer — Italy

As a full-stack developer on the Archon Project, I built the architecture for coordinating a fleet of AI-controlled drones.

I worked on the Node.js orchestration software that communicated with the AI, drones, and sensors via AMQP, while also exposing APIs for mission planning in an AngularJS web interface.

My role spanned backend, frontend, and drone-side development, ensuring a high-performance, high-availability system.

Education

Università degli Studi di Ferrara — 2014-2017
Information Technology — Bachelor's degree

Projects

Whaley — January 2023 - October 2023
P2P, non KYC, non custodial Bitcoin exchange platform

Automaland
the MMO sandbox game for programmers (screeps "clone")

Glasnost
Android and iOS client for Gitlab
